

Clarke's Single Motor Vacuum S12 & S16 and Dual Motor Vacuums, CombiVac and FiltraPac earn CRI's Green Label approval.

These vacuum cleaners deliver Soil Removal, Dust Containment, and Carpet Appearance Retention! Vacuum cleaners are tested following a procedure developed by industry manufacturers and peer-reviewed by scientists with expertise in maintenance and indoor air quality.

Vacuum cleaners earn the Green Label designation after passing the CRI test criteria for:

- Soil removal – must remove a satisfactory quantity of soil in four passes.
- Dust containment – evaluation of the amount of dust particles released into the air by the action of the brush rolls, through the filtration bag and any air leaks from the cleaner system.
- Carpet appearance retention – should keep the carpet looking good.

The CRI strives to assist with vacuum cleaner buying decisions and help keep the indoor environment – surfaces and the indoor air – cleaner. Clarke's FiltraPac backpack offering is no less impressive. Using the same components and filtering systems as the dual motor DMU combined with true advantages in ergonomic operator carry systems FiltraPac offers both high IAQ and Human Health advantages.
